

## D/C HEAT SYSTEM

This system is fast and easy to use and will allow you to heat 10 bags and heating elements at one time in 5-8 minutes and heats to **85°C**

Our space saving rack allows less space and is mobile for easy storage.

The pizza bag has a top and bottom built-in pocket for the double sleeve element to fit properly.

It is completely washable, but you must remove the element first. The double sleeve heating element is the only removable element on the market designed with top and bottom heat.

The power distribution units are available in four models.

Easy connection to cigarette lighter or red/green leads.

The red/green lead displays a red light when the element is heating and a green light when ready for delivery.

Simply plug the pdu into an outlet then connect the red/green lead to pdu. Plug each element (while inside the bag) into the end of the box with the red/green light from the pdu.

**In 5 - 8 minutes the unit is ready, as the lights will show.**

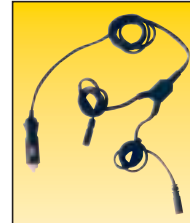

For deliveries, unplug the element/bag and go.

The bags are sold with a cigarette lighter adaptor and the double d/c element.
