INDUCTION SYSTEM CORDLESS

The induction system is easy to use and heats to 110°C in less than 3 minutes and reheats in under 1 minute.

It is easy to maintain, just wipe the top plate with a damp cloth and the body of the charger with a dry cloth.

The pizza bag is capable of holding 3 large pizza boxes 40 cm (14") and is insulated to maintain temperature. It is completely washable, but you must remove the element first.

The element is designed flat to maintain support to the pizza box.

The charger and cradle are designed to attach together so that the element inside the bag will centre correctly over the charger.

The charger has easy-read indicator lights. It has an automatic safety shutoff after 6 hours.

The green lights goes out and the red light comes on, which means charging is in process.

In less than 3 minutes, the red charging light goes out and the green ready light comes on indicating the bag is ready for use.
